Eros Calvimonti

QA Automation Engineer / SDET

karielcode@gmail.com | Argentina | Eros Calvimonti | Eros Calvimonti | My portfolio

PROFILE

QA Automation Engineer / SDET with 5+ years of experience testing web, mobile, and API products, mostly in fintech, digital health, and e-commerce. My day-to-day is **Playwright with TypeScript**: building and maintaining test frameworks, keeping suites stable (cut flaky tests by about **40%** at Fintexa), and running them in **CI/CD** with GitHub Actions or Jenkins. Also experienced with **Cypress, Selenium, and Appium**, API testing with Postman and **SQL**, and performance testing with **JMeter and k6**. Experienced in integrating **agentic AI workflows** into test development, always with human review.

PROFESSIONAL SKILLS

Playwright | TypeScript | JavaScript / Node.js | Cypress | Selenium | Appium | API Testing (Postman, RestAssured) | SQL | JMeter | K6 | GitHub Actions | Jenkins | Azure DevOps | Docker | BrowserStack | Python | Java | Kotlin | Jira / Xray / TestRail | Agentic AI Workflows

PROFESSIONAL EXPERIENCE

11/2025 – Present
Coredio

QA Engineer | SDET

Write end-to-end tests for web dashboards with **Playwright** and run them across different browsers.
Build and maintain automated test suites for the **iOS and Android** apps.
Test **REST APIs**: JSON schemas, authentication flows, and data integrity.
Integrated **agentic AI workflows** into test development to generate test scaffolding, test data and edge cases, and to speed up failure triage, with human review before every merge.
Test the product's **AI-powered features**, validating response consistency and edge-case handling.

10/2024 – 11/2025
Fintexa

SDET | QA Engineer

Built and maintained **Playwright + TypeScript** test frameworks for the main fintech flows (payments, credit approvals); reworked waits and synchronization and **cut flaky tests by about 40%**.
Tested **digital wallet and onboarding** features on web and mobile, including iOS (TestFlight) and Android.
Ran the regression suites in the **CI/CD pipeline** before every release.
Tested APIs and validated data with **SQL**; used **JMeter** to check how the APIs behaved under load.
Worked with backend developers to track down integration bugs around retries and **data consistency in payments**.
Introduced **AI-assisted workflows** to derive test cases from requirements and to analyze flaky test failures.

10/2022 – 10/2024
UPEX

SDET | QA Automation

Built test automation frameworks with **Playwright, Selenium, and Mocha** for UI and API tests.
Tested **Web3** projects: dApps, wallets, and blockchain transactions.
Wrote test cases from requirements, executed them, and reported bugs, working with developers to reproduce and fix them.
Validated backend logic with **SQL** and helped improve CI/CD and the QA process in a Scrum team.

02/2023 – 07/2024
uTest

QA Tester (Freelance)

Ran test cycles for **e-commerce** sites (Shopify, Magento) and other apps on Windows, iOS, and Android across browsers.
Reported functional, content, performance, and visual bugs with clear reproduction steps, and did usability testing.

01/2021 – 02/2022
With Ela Studio

Web Developer

Built and maintained responsive websites with **HTML, CSS, and JavaScript**.
Wrote **unit tests with Cypress** for front-end logic and fixed the issues they caught.
Tested the sites before each release (functional, exploratory, performance, and stress tests) and **improved performance by about 30%**.

PROJECTS

QuickPizza Test Suite: Playwright + k6
API, UI, and performance test suite in **Playwright + TypeScript** (Page Object Model, fixtures, Chromium and Firefox) and **k6** (smoke and load tests with per-endpoint p95/p99 thresholds), running on **GitHub Actions** against a containerized app. Found and documented **3 real defects** with their root cause in the source code.

OrdenARS: Android Expense Tracker (Kotlin)
Offline Android app in **Kotlin** (Jetpack Compose, MVVM, Room, Hilt, Coroutines/Flow) that records expenses automatically from the notifications of 24 Argentine banks and wallets, categorizes them, and sends budget alerts. **50 unit tests** (JUnit, MockK) running on **GitHub Actions**; writing them caught and fixed 3 real bugs.

OrdenARS E2E: Mobile Test Automation
End-to-end suite for the OrdenARS app with **Appium + WebdriverIO + TypeScript** (Page Objects, isolated tests). Simulates bank notifications through **adb** to verify detection, categorization and budget alerts end to end; **9 tests** run on an Android emulator in **GitHub Actions** on every push.

CI Test Automation with Cypress & GitHub Actions
Cypress suite with **Page Object Model** for a calendar app, running on **GitHub Actions** on every push/PR with email alerts on failure.

E2E Testing with Cypress
E2E framework for the OpenCart e-commerce platform with **Cypress** and **Cucumber** (Gherkin), covering critical UI flows.

LANGUAGES

English: Upper-Intermediate | **Spanish:** Native

CERTIFICATIONS & EDUCATION

Technical Degree in Programming
Teclab Institute
Software development, databases, OOP, Java, C++, SQL, and testing.

GitHub Foundations Certification
GitHub, Inc.
Repositories, branching, pull requests, and project management on GitHub.

Playwright: Web Automation Testing From Zero to Hero
Udemy
Framework setup, Page Object Model, API testing, visual testing, and Docker.

Node.js
Modules, npm, asynchronous programming, and server-side JavaScript.

Cypress: Web Automation Testing
Udemy
UI and API automation, assertions, Page Objects, environment variables, and reports.

Selenium with Java
Udemy
Framework from scratch with Java, Gradle, Selenium WebDriver, and Cucumber.

dApps, Web3 and Blockchain
Smart contracts, wallets, and transaction testing in blockchain environments.

Software Testing with Jira & Agile
Udemy
Jira, Scrum, SDLC, TDD/BDD, and test cases with Xray.

Java Course
Udemy
OOP, collections, JDBC, MySQL, and Spring basics.
